

# E-Rattan by BLUEHAUS

E-Rattan™ is a proprietary mallet handle designed by the builders at BlueHaus and is only available directly from the BlueHaus Mallet Shop. Our goal in developing this handle was to keep the flexibility of natural rattan while addressing the warping and inconsistency issues that inevitably occur.

Where natural rattan largely has its strength and rigidity in the exterior bark, the strength of E-Rattan™ lies in the carbon fiber core. The key benefit of the carbon core is consistent flexibility and handles that remain arrow straight. They'll feel the same on day 729 as they do on day 1.

## *Here is some special information about your E-Rattan™ handles:*

- Your E-Rattan™ handles don't have exterior bark so they are a bit softer than the natural rattan handles you're used to and may dent more easily.
- Take care not to strike metal edges (cymbals, drum rims, hardware, key support post, etc.) with your E-Rattan™ handles.
- Your E-Rattan™ handles have a much greater range of motion than natural rattan. Take care to not abuse this feature. Think 'Spider Man' - "With great power comes great responsibility."
- Be aware that handle tape, when removed, may take a few exterior fiber strands with it. Don't be alarmed, as this is purely cosmetic. E-Rattan™ strength comes from its core.
- E-Rattan™ may collect dirt and grime from sweaty hands. Again, this is cosmetic and does not impact the performance of the handle.

E-Rattan™ stores and transfers energy akin to hardwood handles, but with the flex of natural rattan that players expect. It is my hope that this handle design allows you to tap into unexplored elements of your technique and elevate your keyboard percussion performance to new heights!
